Please find below and/or attached an Office communication concerning this application or proceeding.

		Application No.	Applicant(s)			
Office Action Summary		10/518,831	MONTAGNE, LOUIS			
		Examiner	Art Unit			
		John D. Lee	2874			
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1)	Responsive to communication(s) filed on					
2a) <u></u> ☐	This action is <b>FINAL</b> . 2b)⊠ Thi	s action is non-final.				
3)	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is					
	closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.					
Dispositi	ion of Claims					
4)⊠	☑ Claim(s) <u>1-10</u> is/are pending in the application.

Acknowledgement is made of a claim for foreign priority under 35 U.S.C. §§ 119 (a)-(d) or (f). All of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

The two (2) sheets of drawings filed in this application on December 21, 2004, are acceptable.

The preliminary amendment has been entered.

The disclosure has not been studied to the extent necessary to discover all possible minor errors therein. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. Patent 5,607,229 to Rykowski et al. Rykowski et al discloses a luminaire comprising a multi-sectored light-directing element having a light emission window for directing light from an electric light source to a system which employs the light (a display system, a projection system, automobile headlights, etc.). The shape of the Rykowski et al multi-sectored light-directing element is composed of n solids of revolution of "single circularly symmetric shape" forming an integral surface, the shape being calculated to take into account that the light source may be voluminous (i.e. has a large circular cross-section). By definition, the solids of revolution of "single circularly symmetric shape" would include spheroids, ellipsoids, paraboloids, etc. Rykowski et al does not disclose

that the light-directing element directs the light into an optical fiber system. Since, however, elliptical and parabolic light directing elements are commonly used for directing light into optical fibers, fiber bundles, and optical fiber-based systems, because of their mathematically precise light directing abilities, the person of ordinary skill in the art would have found it obvious to use the Rykowski et al multi-sectored light-directing element for directing light into an optical fiber system. As for the specifics of applicant's claim 3, applicant as much as admits (on pages 2 and 3 of the instant specification) that the relationships set forth in the claims are relatively simple and easy calculations for designing the adjoining sectors of the multi-sectored light-directing element. These mathematical relationships would thus have been obvious to a person of ordinary skill in the art. Claims 9 and 10 do not add any specific structural limitations, so that Rykowski et al is applicable to these claims as well. The "shaped housing" of claim 10 is not even defined, since a "saw-cut recess" is not a specific shape.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other light-directing elements utilizing parabolic and/or elliptic surface or surface sections can be seen in U.S. Patent 5,971,571 to Rose, U.S. Patent 6,385,371 to Li, and U.S. Patent 6,418,253 to Whitehead.

All of the prior art documents cited by applicant in the Information Disclosure Statement filed on July 15, 2005, have been considered and made of record. Note the attached initialed copy of form PTO-1449.

Any inquiry concerning the merits of this communication should be directed to Examiner John D. Lee at telephone number (571) 272-2351. The Examiner's normal work schedule is Tuesday through Friday, 6:30 AM to 5:00 PM. Any inquiry of a
